

Entrée: Comic Strip on Newton's Laws of Motion

Activity: You will create a 12 box comic strip based on your knowledge of Newton's three laws of motion. This comic strip will take a single object (your choice) on a journey that has it experiencing ALL three laws in some way.

Requirements:

- It must be typed or neatly written
- Each picture must be in color (that means more than one color used)
- The examples used must fit the three laws clearly
- The comic must make sense and illustrate your knowledge of the laws
- Be creative and clever! Remember, this is a comic strip- just writing definitions is not appropriate- you should be using examples and telling a story

***This is an example of the box layout. USE YOUR OWN PAPER- I suggest you turn your paper sideways (landscape) and use a ruler to draw lines.

COMIC TITLE BOX w/ student name
